## *Installation Instructions for Drop In Ice Bins*

---

**STEP 1.** Prepare cut out in surface for installation.

**STEP 2.** Check for proper fit into surface. No gaps should appear between cut out in surface and sink edge.

**STEP 3.** Place sink into cut out in surface.

**STEP 4.** From underside of surface, attach the mounting hardware to each threaded stud and tighten to pull sink down to surface top securely.

**STEP 5.** To retain certification of unit, the following must be done after installation:

- a. Excess threads on mounting studs must be removed. Please cut stud to the proper length to insure that no more than 2 threads are exposed below the nut after installation.
- b. Use an NSF certified brand of caulking to cleanly caulk around the entire edge of the ice bin where it comes in contact with the surface top.
